Overview-

We are seeking a highly skilled and experienced Principal Engineer with 10+ years of technical experience to join our team. The ideal candidate will have a strong background in the development, design, and architecture of microservices within the Java stack. This role requires a strategic thinker who can lead and mentor a team while driving our technical vision and roadmap forward.

Key Responsibilities:

1. Architectural

- Design and architect scalable, robust, and secure microservices-based solutions using the Java stack.

- Lead the architectural direction for projects, ensuring alignment with business objectives and industry best practices.

2. Development and Design

- Hands-on development of microservices, ensuring high performance and responsiveness to requests from the front-end.
- Collaborate with cross-functional teams to define, design, and ship new features.
- Conduct code reviews, provide constructive feedback, and ensure coding standards are met.

3. Technical Strategy and Innovation

- Drive technical innovation and continuous improvement within the team.
- Evaluate and recommend tools, technologies, and processes to ensure the highest quality product platform.

4. Team Leadership and Mentoring

- Mentor and guide junior and mid-level engineers, fostering a culture of learning and growth.
- Lead by example in following best practices in software engineering, including Agile methodologies.

5. Collaboration and Communication

- Work closely with product managers, designers, and other stakeholders to understand requirements and translate them into technical solutions.
- Communicate effectively with both technical and non-technical stakeholders.

Qualifications-

· Experience: 10+ years of technical experience in software development, with a significant focus on designing and developing microservices architecture.

· Technical Skills:

- Proficiency in Java and related frameworks (e.g., Spring Boot).
- Strong understanding of microservices architecture and design patterns.
- Experience with RESTful APIs and asynchronous messaging.
- Knowledge of containerization technologies (e.g., Docker, Kubernetes).
- Familiarity with cloud platforms (e.g., AWS, Azure, Google Cloud).
- Experience with DevOps practices and CI/CD pipelines.
- Knowledge of database technologies, both SQL and NoSQL.
- Familiarity with frontend technologies and frameworks, would be a plus

- Leadership: Proven experience in leading and mentoring engineering teams.
- Problem-Solving: Strong analytical and problem-solving skills with a focus on delivering high-quality solutions.
- Education: Bachelor's or master's degree in computer science, engineering, or a related field.
